Design Proposal

Team members: Cathy Cai, Tianrun Liu, Damian Wasilewicz, Jeffrey Wu

Team name: BuggyBloggers

Team project: a blog site

Project Manager: Damian Wasilewicz

Program Component Roles:

1. Homepage
 - a. Option for login or sign ups
 - b. Features blog directory with options to
 - i. View other people's blogs
 - ii. Edit user's own blogs, if signed in
2. Blog Page
 - a. Lists the posts associated with its owner
 - ~~b. Can have multiple collaborators but only 1 owner~~
Deemed too messy, decided to focus on limiting editing access to owner of blog, restricting access to those viewing
 - ~~c. Option to sort the posts by popularity, timestamp, and category~~
Instead of doing this, team decided to create search bar that allows for users to search users, posts, or blogs
3. Post
 - a. The basic writing components of each blog
 - b. Can only have 1 writer
 - c. Allows upvotes and downvotes by other users to determine the popularity
 - d. Features timestamp
4. Blog Editing Page
 - a. Allows users to create a new post or edit an old post if logged in
 - b. Plain text editor
 - i. Heading of post
 - ii. Body of post
 - ~~iii. HTML guidelines if they want control over formatting~~

Too complicated for user, simpler and more accessible if text is only thing required.

iv. Will be filled in if it's a post they're editing

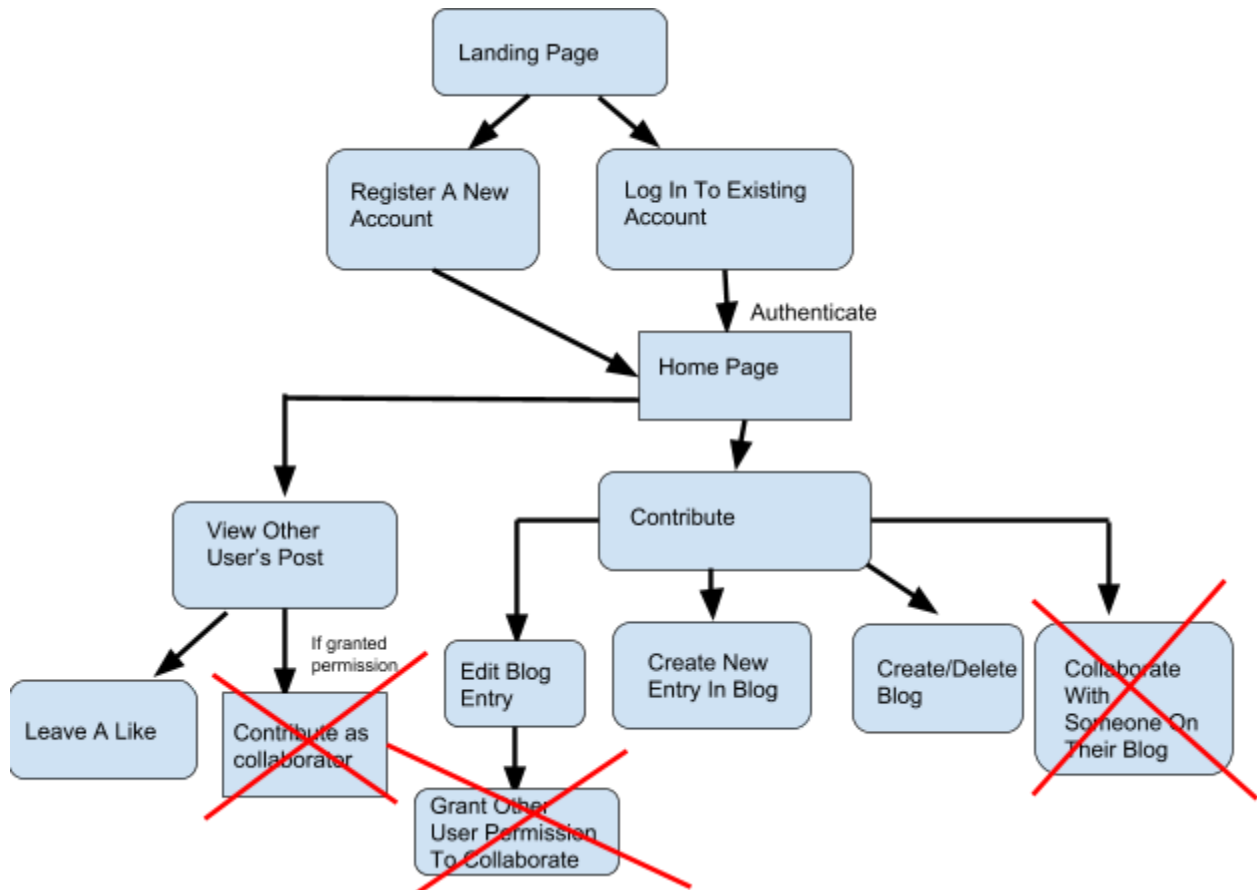

~~c. Photo uploader and formatter~~

Unnecessary and purely aesthetic

5. Blog Creation Page

- a. Allows users to create a new blog (each user has a default, empty blog when the account is created)
- b. Options for the blog title, collaborators that can post on it, and category (Food, fashion, travel, tech, sports, and music)
 - i.

Component Map

Database schema:

Blogs Table	
Field	Type
BlogID	INTEGER (PRIMARY_KEY)
OwnerID	INTEGER
CollaboratorIDs	TEXT
BlogTitle	TEXT
BlogDes	TEXT
Category	TEXT

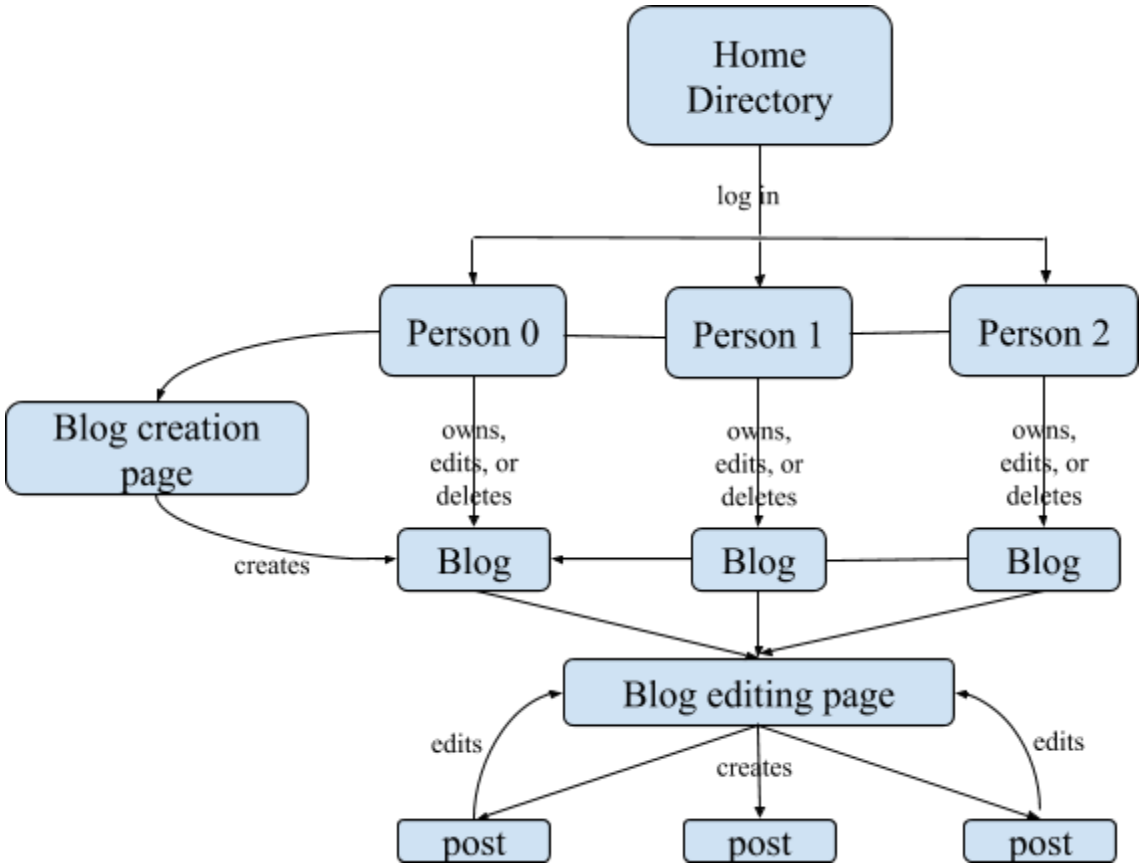

Users Table	
Field	Type
UserID	INTEGER (PRIMARY_KEY)
PFP	TEXT
Username	TEXT
PasswordHash	TEXT
LikedPosts	TEXT

UserID":"INTEGER PRIMARY KEY", "PFP":"TEXT", "Username":"TEXT UNIQUE",
 "Password":"TEXT", "LikedPosts" : "TEXT"}

Posts Table	
Field	Type
PostID	INTEGER
BlogID	INTEGER
AuthorID	INTEGER
Content	TEXT (HTML File)
Timestamp	DATETIME

Votes	INTEGER
Heading	TEXT

CREATE NEW POST

Heading

Content

Job distribution:

Cathy Cai: Set up the structure of the database and how to populate it (how creating new blogs, new user sign ups, and blog edits will write to database)

Tianrun Liu: Create html templates, post creation and editing page, edit-logs for blogs and posts

Damian Wasilewicz (PM): New user registration, authentication, checking if user has permission to edit blog, editing some dropdowns and aesthetics, wokring on search and categories

Jeffrey Wu: Create the blog viewing interface and actions of posts (upvoting, sorting, etc.)
